FORM 10-K - Tesla, Inc. (TSLA)

Reporting Period: Fiscal Year Ended December 31, 2023 / FY2024 Update | Document Source: Official SEC EDGAR / Investor Relations

CONSOLIDATED FINANCIAL OVERVIEW

Total revenues for the year were $96.77 billion, an increase of 19% from $81.46 billion in the previous year. Automotive revenues totaled $82.42 billion (+15%), Energy Generation and Storage reached $6.04 billion (+54%), and Services and Other contributed $8.32 billion (+37%).

Gross margin contracted to 18.2% from 25.6%, impacted by vehicle pricing reductions, reduced ASPs (Average Selling Prices), and startup costs associated with the Cybertruck production ramp in Austin, Texas.

Operational & Delivery Metrics:

Metric	Full Year	Prior Year	Change (%)
Total Deliveries (Vehicles)	1,808,581	1,313,851	+38%
Energy Storage Deployed (GWh)	14.72	6.54	+125%
Supercharger Stations	5,952	4,678	+27%
Operating Cash Flow	$13,256M	$14,724M	-10%
Free Cash Flow	$4,358M	$7,552M	-42%

ENERGY STORAGE AND NEXT-GEN PLATFORM

Energy storage deployments expanded 125% to 14.72 GWh, led by production scaling at the Lathrop Megafactory. Energy storage gross profit nearly quadrupled, demonstrating growing contribution to corporate margins.

Full Self-Driving (FSD) Supervised neural network training compute expanded significantly with the commissioning of the Dojo supercomputer cluster and extensive NVIDIA H100 GPU clusters.

RISK FACTORS: VEHICLE MARGINS AND COMPETITION

Aggressive price competition in the global electric vehicle sector, notably in China from domestic manufacturers, poses ongoing downward pressure on automotive operating margins.

Autonomous driving regulations, liability frameworks, and public perception regarding AI-assisted vehicle safety represent critical operational and reputational variables.
